The following table lists the percentage of students at or above the national 50th percentile rank (average = 50th percentile) and the median grade equivalency - a score that represents the average performance of students tested in a given month of the school year. The numeral to the left of the decimal point refers to the grade for which the score is typical, and the numeral to the right of the decimal point represents the one tenth of the school year, or one school month.

Since grade equivalents cannot be averaged, the GE that divides the group exactly in half is used.
